

High Availability Business Continuity Mission–Critical Replication & Recovery Services

Complete client environment (file/print, Exchange, and application data) is replicated to Xand facility using Double-Take Software. Upon declaration, Xand can bring the alternate server online for access using terminal services.

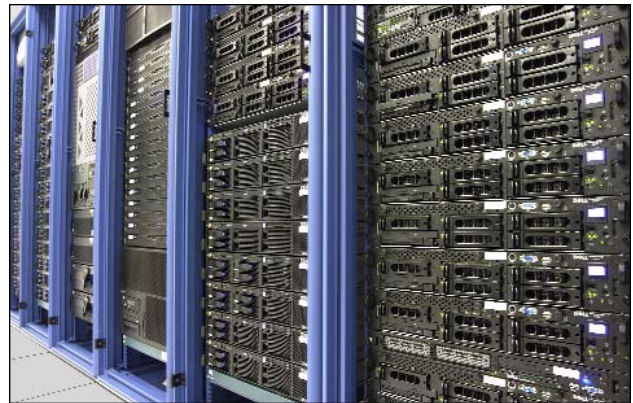

Replication and Access will take place over VPN connection between client and servers at Xand or a dedicated line, whichever is deemed more effective.

Change Management process will be required for synchronization of OS and application environment to Xand environment.

Also Available- Business Continuity Workspace. Your own dedicated office in our facility – connected to your servers here, the Internet and your clients if your office is unavailable.

TYPICAL ENVIRONMENT

- File/Print and Application Servers
- Microsoft Exchange Server
- Active Directory Server
- Terminal Services Server
- Dedicated Cisco Pix Firewall
